The existence of M-Payment Systems (M-Commerce) is back to 1997 when the first two mobile phones enabled on Coca Cola vending machine. It was installed in the Helsinki area in Finland. In this payment model, system send SMS text message to vending machine for payment. Also in 1997 the first mobile phone banking system was started working at Merita bank of Finland which also uses SMS [2].

18 pt

M-Payment is an innovated branch of E-Commerce, before the existence of M-Commerce people use computer to connect networks and buy or sell thing trough it, this situation has some limitation for people like connectivity, or availability [3]. Then people start to use smaller device like laptop computers, PDA and etc, But they still had problem with connectivity of devices, this problem has been solved by new media called wireless network connection and people could connect everywhere via this new connection method. By appearance of M-Payment systems people adopt it faster because of its mobility, ubiquity, convenience, instant connectivity and personalization and low cost of device [4].

18 pt

M-Payment methods can be categorized in four primary models:

12 pt

1. Short Message Service (SMS) based Transaction payment [4].
2. Direct Mobile Billing (DMB) [5].
3. Mobile Web Payment (WAP) [6].
